methods of the

The specification describes methods for introducing localized mutations into target genes in plant cells. The methods comprise using a recombinogenic oligonucleobase comprising 2 regions homologous to a target gene and an intervening mutant region. The methods can be used to introduce localized mutations into target genes to introduce desirable traits, e.g. selective growth advantage under appropriate selective conditions, change in colour of plant cells growing in a callus, bestelding a colour of plant cells growing in a callus.

herbicide resistance, or improved preservation of fruit or flowers. They can be used in plants such as maize, wheat, rice, lettuce, potato, tomato, canola, soybean or cotton cell. The present sequenc represents

The present sequence encodes a Ricinus communis desaturase from clone pCGN3230. The present invention describes a recombinant DNA construct comprising a DNA sequence encoding a plant Delta-9 desaturase protein. The present invention also provides a method of modifying fatty acid composition in a host plant cell from a given fatty acid saturation to a different fatty acid saturation, comprising growing a host plant cell containing a recombinant DNA sequence which encodes a plant cell containing a recombinant DNA sequence which encodes a plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1192

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                QΥ
                                                                                                                                                                                                            14-NOV-1990;
16-MAR-1990;
13-AUG-1990;
                        A desaturase was purified from C. tinctorius and sequenced. Based on this sequence, oligonucleotide probes were synthesised and used to screen a C. tintorius embryo cDNA library to obtain DNA (AAQ13963) encoding the desaturase. The DNA for the C. tinctorius desaturase was also used as a probe to isolate DNA encoding desaturase from Ricinus communis (AAQ13964), Brassica campestris (AAQ13965) and Simmondsia chinensis (AAQ13966).

A desaturase was purified from C. tinctorius and sequenced. Based on this sequence, oligonucleotide probes were synthesised and used screen a C. tintorius embryo cDNA library to obtain DNA encoding t desaturase. The DNA for the C. tinctorius desaturase was also use a probe to isolate DNA encoding desaturase from Ricinus communis (AAQ13964), Brassica campestris (AAQ13965) and Simmondsia chinensi

                                                                                                                                                                                                                                                                                                                                                                                                                                                            The desaturase gene isolated from Carthamus tinctorius was present as the clone pCGN2754. The clone can be used to construct, acyl carrier protein expression cassettes in a binary vector for plant transformation. This allows integration of nucleic acids encoding a desaturase sequence and a synthase sequence into the genome of a host cell. A plant desaturase includes any enzyme capable of catalysing the insertion of a first double bond into a fatty acid calcaly specially between C9 and C10.

Genes encoding synthase proteins may be used in nucleic acid constructs to modulate the amount of synthase activity in a host cell. Nucleic acid constructs may also be designed to decrease the expression of a synthase protein, i.e., constructs containing anti-sense synthase sequences. The construct allow the generation of plants bearing seeds which have enhanced oillow the generation of plants bearing seeds which have enhanced of common plant unsaturated fatty acids is catalysed by a desaturase. It incleic and alpha-linoleic acids found in storage triglycerides are produced from the desaturation of stearoyl-ACP to

The present invention describes a recombinant DNA construct comprising a DNA sequence encoding a plant Delta-9 desaturase protein. The present invention also provides a method of modifying fatty acid composition in a host plant cell from a given fatty acid saturation to a different fatty acid saturation, comprising growing a host plant cell containing a recombinant DNA sequence which encodes a plant desaturase under the control of regulatory elements functional in the plant cell during lipid accumulation. Also, ollseeds having a modified level of fatty acid saturation and oils produced from such oilseeds.

                 The specification describes methods for introducing localized mutations into target genes in plant cells. The methods comprise using a recombinogenic oligonucleobase comprising 2 regions homologous to a target gene and an intervening mutant region. The methods can be used to introduce localized mutations into target genes to introduce desirable traits, e.g. selective growth advantage under appropriate selective conditions, change in colour of plant cells growing in a callus, herbicide resistance, or improved preservation of fruit or flowers.
                                                                                                                                                                                                                                                                                                                     Introducing mutations into target genes in plant cells recombinggenic oligonucleobase comprising 2 regions how
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Carthamus tinctorius.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1186

transform Umbelliforae plants, pref. Brassica napus and rapus plants. The antisense delta-9-desaturase construct acts to downregulate the delta-9-desaturase without downregulating the PAPD. The transformed plants may be cultured to produce petroselinic acid which is an isomer of oleic acid. Unlike oleic acid, petroselininc acid may be refined by ozonolysis to give lauric acid and adipic acid which are useful for polymerisation to nylon and other high value polymers. The petroselining acid may therefore be used as an industrial feedstock in the manufacture
                                                                                                                                                                                                                                                  This sequence represents the B. napus delta-9-desaturase gene. This sequence was used to transform a plant such that an antisense constraint such that an antisense constraint such that an antisense constraint such that the production with the petroselinic acid producing used in conjuction with the petroselinic acid producing desaturase (PAPD) enzyme gene from coriander. The PAPD envisor originally thought to be a delta-9-desaturase, however the invertibility in the particular of the producing on a palmityl-acyl carrier protein, and would therefore be a palmitate desaturase rather than a stearoyl desaturase. The PAPD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               delta-9-desaturase; delta-4-desaturase; palmityl-acyl carrier protein; palmitate desaturase; stearoyl desaturase; antisense; Umbelliforae; Brassica napus; Brassica rapus; downregulate; isomer; oleic acid; refine; ozonolysis; lauric acid; adipic acid; polymerisation; nylon;

BND11 and clone BND9 (see also AAT63438) were isolated from a cDNA library constructed from RNA obtd. from mid maturation seeds of Brassica napus cv. 212/86. The library was screened with the coding region of a delta-9 desaturase gene from Brassica campestris. An antisense gene was constructed to generate antisense RNA homologous to both BND9 and BND11. In transgenic Brassica plants expressing the
                                                                                                                                                                                                                                                                                                                                                                                                                             Increasing levels of stearate in plant seed triglyceride(s) using a DNA sequence encoding acyl-ACP thioesterase protein substantial activity on C18:0 acyl-ACP substrates
                                                                                                                                                                                                                                stearoyl-ACP desaturase antisense construct and mangosteen Class I acyl-ACP thioesterase GarmFatAl (see also AAW14795), levels of Cl8:0 in the seed oil may exceed 50% of total fatty acids.

The cells were plated and control transferred to nitrocellulose filters for hybridisation. Probes were called based on the N-terminal amino acid sequence of purified control plaque purification and the regions of each vector comprising the coll transfer were excised. The resulting phagemids were used to infect E.coli XL-1 Blue cells to give 6 double-stranded plasmids composed to the coll transfer were excised. The invention covers chimeric compositing uncleotides 1-2243, 70-1245 or 16-1245 of this sequence, linked to suitable control sequences. They are used for transforming oil-producing plant cells to produce antisense in the seed, overexpress precursor desaturase in the seed overexpress precursor desaturase in the seed overexpress precursor desaturase in the calls to produce antisense in the seed overexpress precursor desaturase in the seed overexpress precursor desaturase in the seed overexpress precursor desaturase in the calls to produce antisense in the seed over plants of the produce antisense in the seed over plants of the plant

                                                                                                                                                                                                                                                                          This is the nucleotide sequence of the soybean stearoyl ACP-desaturase gene, used in the method of the invention, which involves the creation of chimeric genes which are used in (antisense orientation) to transform plant cells. The nucleic acids are useful for controlling the levels of (un)saturated fatty acids in soybean oil. In transformed cells (seeds), the chimeric genes transcribe the antisense RNA to the complementary mRNA for the enzyme. This results in inhibition of expression of the endogenous enzyme and reduction in desaturates and polyunsaturates and high in monosaturates, giving an oil

The method comprises producing a transgenic cotton plant having a gene construct which includes a fatty acid blosynthesis gene operably linked to a promoter sequence capable of conferring expression of the delta9-desaturase (delta9 stearcy1-ACP desaturase) gene, or fatty acid delta12-desaturase (oleoy1-PC delta12-desaturase) gene in the seed of a cotton plant. The invention is useful for producing cottonseed oil with reduced palmitic and/or linoleic acid content, and increased stearic and/or oleic acid content. The present sequence is cotton stearcy1-ACP delta9-desaturase (ghSAD-1) protein cDNA contents the invention of the content of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modifying endogenous oil of cotton plants, to produce cotton with reduced palmitic and/or linoleic acid content, involves transgenic plants containing a fatty acid biosynthesis gene i construct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1553 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 2; Fig 2; 201pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gossypium

Pred.

No.

is

the number of results predicted by chance to have

a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
